

COBOL COMPILE LAB

Watch the COBOL compile lab video (**THE VIDEO HAS YOU COPYING TO LIBRARIES ECUCOBOL AND ECUJCL THAT YOU DON'T HAVE. NO NEED TO CREATE THEM, JUST USE LANG.SOURCE AND LANG.CNTL AS DIRECTED BELOW**).

Copy the files HELLO from **CWSEAY.COBO**L and **CWSEAY.JCL** (two files with the same name from two different libraries) to **YOUR LANG.SOURCE** (copy the **HELLO** source code) and **LANG.CNTL** (copy the **HELLO JCL** file) libraries. **NOTE THAT YOU MAY HAVE TO EDIT THE JCL TO POINT TO YOUR LIBRARIES.**

Compile and run the file HELLO with the original text in it (by **SUBMITTING** the JCL HELLO that you have copied to your **LANG.CNTL**).

Use the **GO** section of **SDSF** to get a screen shot of your original output.

Modify the source code in **HELLO** to **DISPLAY** three lines of new text (overwriting the old text). This file is now in your **LANG.SOURCE** library because you copied it.

Repeat the compile steps above to display the modified output from the **GO** section of **SDSF** **WITH YOUR EDITED OUTPUT.**

Screen shots must include (all labeled appropriately):

The original source code from **HELLO**

A screenshot of **SDSF** output showing that the program compiled, linked, and executed (**GO**) the original code with the original message.

Output from the **GO** section of **SDSF** of the execution of the original source code

The modified source code from **HELLO**

A screenshot of **SDSF** output showing that the program compiled, linked, and executed (**GO**) the modified code.

Output from the **GO** section of **SDSF** from the execution of the edited message.

100 -250 words on what you did **POINTS WILL BE TAKEN OFF FOR WRITING LESS THAN 100 WORDS!** There is a lot to talk about in this lab
